SCSI to USB Adapter Module (Accessory)

The SCSI to USB Adapter Module is a device used to update Aeroflex radio test set software (RCTS-001 and RCTS-003B) via the adapter module's USB port.

The SCSI to USB Adapter Module will allow the user to capture and store report data onto a USB thumb drive. The unit connects to the SCSI harness between the TS-4317 and the J-4843A.

Features include:

Reprogrammability

The user is able to re-program the TS-4317, J-4843A and the RPM. This eliminates the need for an external computer for support equipment.

Print to file

Using the adapter allows the operator to choose whether the test report is printed (with optional printer) or stored to a file onto the memory stick. The operator can insert the memory stick into a desktop PC and data files can be printed or archived for QA purposes.

Future Expandability

The USB port is 2.0 compatible which allows for future radio testing performance upgrades.

Added features for the RCTS-001 Test Set

The adapter replaces the SCSI CD-ROM during LRU troubleshooting and reprogrammability stages. With the supplied software kit (AAJxxx), the user is able to step through the maintenance guide in order to isolate and repair the unit under test.
